VAUGHAN MTS #1E PROJECT PRESENTATION

- Project details for Vaughan MTS #1E project – Address, MW size, overview of site, layout review
- Questions & Answers recorded below

Question

1. What are setback implications for this project vs development underway?

Answer

1. We reviewed drawings and maps and determined that all warehouse development is occurring west of the Hydro One ROW so there would be no impact to the development by the BESS project due to us being on the other side of the ROW. Regardless of this we would still complete the municipal site plan approval process at which point later in the design, adjacent land owners may be notified and asked to comment again.

2. Can we use surplus land

2. We are planning on the site shown, however, on the off chance that access to this site falls through, we may look at alternates later on in the development process so possibly we would be able to use some land in the area. We will schedule a follow up meeting and stay in touch.
